

Revival and Renovation of Water Bodies RamarTeertham

**By
Vivekananda Kendra – Nardep**

This month, we are giving the photo gallery of the “RamarTeertham” which we renovated in the year 2015. The Teertham is located on the main road. Maximum number of visitors are visiting Ramarteertham which received a face lift after a long long gap. The mud excavated, all the four sides of the water body strengthened, repaired the central mandapam and given a traditional colour coating of white and red strips. In addition, the neglected inlet was renovated and filled with proper filter mechanism. A new entrance with innovative spiral arch greets the pilgrims visiting the holy water body.

A retaining (supporting) structure to avoid collapsing the old wall

Repairing and Renovating the inlet of the RamarTeertham

Scraping the old paint before giving a new coat

A beautiful renovated central mandapam

Pillars with Nagas and spiral arch – an architectural wonder for the common man
